

ENCROP

ABSTRACT

The overall objective of the proposed action is to promote the cultivation, production and utilisation of lignocellulosic energy crops at the European level. The project aims at increasing the knowledge of different actors along the energy crop production chain, as well as the general public, on the ecological, technical, economic, logistic and administrative matters related to energy crop production and utilisation, thus leading to resolving potential bottlenecks and resulting in an improved public perception and more widespread production and utilisation of energy crops.

ENCROP aims to boost energy crop business by:

- Increasing the general knowledge, awareness and acceptance about energy crops
- Disseminating the know-how and results gained in the recent r&d activities
- Promoting the confidence and collaboration between the actors of energy production chain
- Developing crop-to-energy business and contract models
- Dissemination of information about energy crops

Propósitos de ENCROP para potenciar el negocio de cultivos energéticos mediante:

- El incremento del conocimiento general, concienciación y aceptación de cultivos energéticos
- Diseminación del know-how y resultados obtenidos de las últimas actividades de I+D
- Promoción de confianza y colaboración entre actores de la cadena de producción de energía
- Desarrollo de negocios cultivo-a-energía y modelos de contrato
- Diseminación de información sobre cultivos energéticos
